

Computer Science – Client Feedback

Me: Hello, how was the application? Where there any bugs or lags?

Client: Hi, there were some lags in the application and delays with the clients and orders loading, but that only happened when I had too many applications open.

Me: Well yes, I will note that in the future to make the loading process faster. Apart from that did the application work as you wished?

Client: Oh yes! The app really helped me organize the orders and it made the process of logistics and delivery so much faster. In fact, it's so efficient that my co-workers also want this kind of application? Is it possible to send them?

Me: I'm glad that it made the process much more efficient. I'm afraid that sharing the application with others won't be possible, because the database structure is only based on a single user. There is no way to distinguish or authenticate multiple users and their orders/clients, but if you want so we can restructure it and introduce an authentication system so multiple users can use the application.

Client: Thank you! That would be nice. I also noticed that when I have more than 10 orders the scrolling becomes a bit of a waste of time. What is the best way to identify the order that I'm looking for and can you implement it so the process becomes even more efficient?

Me: Yes, maybe we can implement a search bar on top so you can search orders based on the data that you have. That will exempt all the non-matched orders and possibly clients and only show the matched ones. Sounds Fair?

Client: Also, if we are talking about efficiency can we also implement some kind of productivity level counter? This way it would be much easier to compare days that are less or more productive.

Me: Hmm, yes we can but we should think about what kind of counter it would be and in what way it will measure the productivity. Maybe we can count the orders or the time spent on the deliveries or it would be optimal to measure the profits by day. This is the topic on its own so let's meet later and talk about it.

Client: Sure, that sounds fantastic!

Me; Are there any more concerns? Also if you have any problems during the use of the application process please don't hesitate to contact me!

Client: No at the time being there are no concerns. I will contact you if needed. Thanks!

Me: No problem! Bye!
